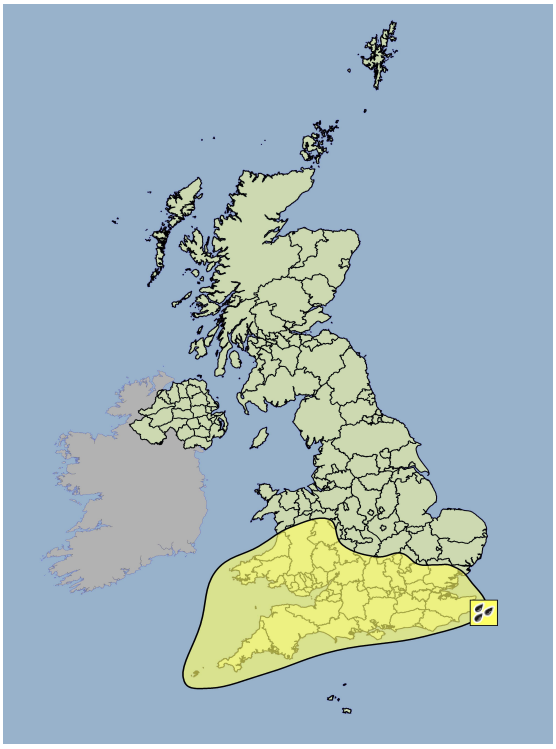
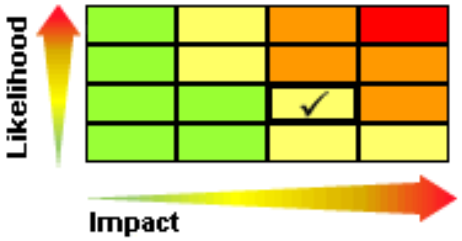
National Severe Weather Warning Service





Chief Forecasters Assessment
Another Atlantic depression is expected to bring a spell of heavy rainfall and strong winds to parts of the UK later on Wednesday, perhaps lasting into Thursday. The track and intensity of the depression is currently very uncertain, meaning that confidence in rainfall amounts and distribution across the UK is low. However, southern and western parts of England and Wales look most likely to see further heavy rainfall. Falling soon after earlier widespread rainfall, the cumulative effects of these weather systems are likely to exacerbate the current flooding situation. This Alert will be updated over the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **15:00 on Wed, 12th Feb 2014** until **12:00 on Thu, 13th Feb 2014**

Following a brighter, showery interlude on Wednesday, perhaps with some gusty winds and wintry showers, a further spell of widespread rain, heavy in places, is likely to spread northeastwards across England and Wales during the afternoon, evening and overnight, perhaps lasting into Thursday. Following earlier heavy rainfall, the public should be aware of the potential for further flooding in places.

Gale force winds are likely to be an added hazard in places.

This is an update to the Alert first issued on Sunday.
